

*We help growing business!*

## Why to choose us?

- ✓ We are one of the leading Turkish-Romanian consortium **in the renewable energy sector** in Romania.
- ✓ The advantage of benefiting from the experience of a local company for over 15 years as well as the international experience of a Turkish company.
- ✓ We are the only consortium in Romania that offers an integrated service from project development, bank and EU financing to commercial operation and technical maintenance.
- ✓ The consortium is comprised of an experienced multi-national team, which has a very efficient communication using Turkish, English and Romanian languages.
- ✓ We have one of the best technical offers in terms of equipment, works, design and project management.
- ✓ We operate using the highest level of quality, proven by the hundreds of MW project references resulted over the years, both the timely commissioning of the project and the international experience of our joint teams on a total of over 1 GW projects. We do not believe in coincidences, but we do believe in talent, effort and providing the expected results.
- ✓ We are a flexible, adaptable company that is fully involved in each of its projects in order to **respond to our clients' needs**.

- ✓ Technical, legal and financial due diligence;
- ✓ Project Management Services for investors focused on developing renewable energy projects in Romania;
- ✓ Construction of turnkey power plants;
- ✓ Obtaining non-reimbursable funds (grants) from EU and bank financing for investors focused on developing renewable energy projects;
- ✓ Renewable asset management.

## What are my advantages as an investor in green energy in Romania?

- ✓ Romania offers access to one of the largest single markets in the world, with a significant growth potential. Entrepreneurs who choose Romania for the development of investment projects can benefit from all the advantages arising from the status of an European investor.
- ✓ For the development of medium and long-term projects, investors are looking for a favorable and stable business climate, as well as competitive profit margins, which is why Romania is an optimum choice for them.
- ✓ Due to its geographical location, the territory of Romania presents significant potential for the establishment of photovoltaic plants. Romania benefits from a high level of solar radiation, having approx. 210 sunny days per year, which means that there is a significant amount of solar energy available, with an annual flow of 1,300MWh/ha/year. Romania has the largest wind potential in Southeast Europe, namely 14,000 MW and Dobrogea region ranks second in Europe, after Scotland, in terms of wind energy production potential.
- ✓ Electric energy produced from renewable sources represents the future of the energy sector, as well as investment opportunities.
- ✓ The renewable energy industry is the safest business of the moment, due to the financial stability it offers on the long term.
- ✓ As an investor in renewable energy, you will have alternative opportunities to invest your capital, benefiting at the same time from an attractive return, as well as building a balanced investment portfolio.
- ✓ Investing in renewable energy is a business model that offers increased scalability, due to the possibility of expanding the initial investment, as well as the continuous development of technology.
